

On the development of artificial intelligence

Zhu lina

April 9,2018

According of this article—artificial intelligence: you don't know the joy and sadness,I think Artificial intelligence has both advantages and disadvantages in its development. On the one hand, we are entering an age of accelerated development of artificial and robotic technology. Digital machines have escaped their narrow confines and started to demonstrate broad abilities in pattern recognition, complex communication, and other domains that used to be only human. We've recently seen great progress in natural language processing, machine learning , computer vision, simultaneous localization and many other areas. On the other hand, complete artificial intelligence maybe endanger humans.Therefore, artificial intelligence should be regulated by the state and international community. This is, of course, only a bold guess. I think artificial intelligence needs to be learnt a lot, and we need to further explore it.
